Hearlihy authors deliver architecture, engineering know-how to students

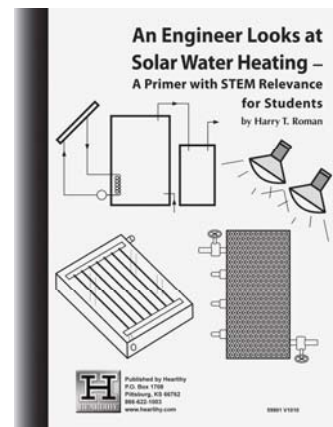

Hearlihy is known for its drafting and technology supplies, but it also develops a range of affordable books to support and guide students and teachers through architecture and engineering activities.

The most prolific Hearlihy author is engineer Harry Roman, who has nine Hearlihy exclusive titles with three more in progress. Roman's guides feature hands-on activities using readily available materials and local sources. With more than three decades of engineering under his belt, Roman has a concise and unique take on technology subjects. Some of his books include:

- *An Engineer Looks at Solar Water Heating*
- *An Engineer Looks at How the Water Company Works*
- *Thinking Like an Engineer*
- *Engineering Activities with Paper and Cardboard*

Roman credits his father, teachers, and admiration for Thomas Edison as the reasons he entered the engineering field. He remains passionate about engineering.

"Twenty-five years ago when I became involved in the launching of the New Jersey technology education movement, I began expressing and handing down the educational joy I felt, and still do today," Roman said. "Retired early now, I write and spread the word, using simple educational activities and my 40 years in the engineering and invention profession as a central focus. It's a way of honoring the many great teachers I had and a father who never missed an opportunity to teach me something."

With more than a dozen books bearing his name, Paul Wallach has written the texts *Fundamentals of Modern Drafting* and *Fundamentals of Architectural Design* as well as Hearlihy exclusives such as:

- *Green Architecture*
- *Print Reading for Drafting & Engineering Drawing*
- *Architectural Perspective and Rendering*
- *Instructional Workbook for Architecture and Construction Graphics*

Wallach brings expertise to his writings with years of architectural experience doing drafting, designing, and more. He has also taught architecture and engineering drawing at the secondary and postsecondary levels.

To learn more about Hearlihy's books and other products, visit www.hearlihy.com or call 866-622-1003.

###

Hearlihy is a leading supplier of drafting and technology tools that enable teacher and student success with reading and writing the language of industry as well as learning the application of technology.
